AN INVESTMENT NEWSLETTER FOR CLIENTS & PROSPECTS

Provided by Jerry K. Ask Investment Services

Let Us Help You Manage Your Company 401(k)

Do you often wonder if your plan to manage your 401(k) is correct?

Have you meant to spend more researching your investment choices but have been too busy?

If so, we believe we can help. Your 401(k) is likely the largest financial asset you have. We hope you are giving it the attention it deserves.

We have all seen the stats. Individual investors typically return less than institutions due to the emotions involved with investing. Consider this - Each 1 or 2% difference in return per year, makes a lot of difference to you in dollars & future retirement income. Hypothetical Example: If your 401(k) is worth \$400,000, each 2% difference in performance equals \$8,000 per year.

Many investors have good intentions to monitor their investments regularly, but lack the time, training and/or temperament to effectively evaluate account performance and update objectives as they progress through different stages of life.

We know the type of people you are. Hard working. Dedicated. Smart. However, we also know you are busy. In order to take the burden of managing this money off your "to do" list, **we are announcing a new service specifically for Rockwell, Quaker, and other employees who have money in a 401(k).** It is called Investment Advisory Consulting Services.

For a .4% (.004) annual fee (paid quarterly based on account value at end of quarter), we will manage your 401(k) for you.

Some of the things we will watch for is:

- Maintaining portfolio balance and diversification.
- Overconcentration in one stock (Collins) or sector.
- Exposure to a possible risky bond market at this time.

We will make portfolio change recommendations to you and monitor your account.

Give us a call at (319) 395-9230 to up a time to discuss how we can help you manage your company 401(k). This meeting is complimentary.

Staying on Track with Your Retirement Investments

“It is a sad fact that roughly half of all Americans live from paycheck to paycheck .

That does not count the ones who don't work at all.

Roughly 4 out of 10 in the latter phases of their work life have negligible retirement savings.”

-Newsmax Magazine/June 2013

Investing for your retirement isn't about getting rich quick. More often, it's about having a game plan that you can live with over a long time. You wouldn't expect to be able to play the piano without learning the basics and practicing. Investing for your retirement over the long term also takes a little knowledge and discipline. Though there can be no guarantee that any investment strategy will be successful and all investing involves risk, including the possible loss of principal, there are ways to help yourself build your retirement nest egg.

Compounding is Your Best Friend

It's the “rolling snowball” effect. Put simply, compounding pays you earnings on your reinvested earnings. Here's how it works: Let's say you invest \$100, and that money earns a 7% annual return. At the end of a year, the \$7 you earned is added to your \$100; that would give you \$107 in your account. If you earn 7% again the next year, you're earning 7% of \$107 rather than \$100, as you did in the first year. That adds \$7.49 to your account instead of \$7. In the third year with a 7% return, you'd earn \$8 and have a total of \$122. Like a snowball rolling downhill, the value of compounding grows the longer you leave your money in the account. In effect, compounding can do some of the work of building a nest egg for you.

The longer you leave your money at work for you, the more exciting the numbers get. For example, imagine an investment of \$10,000 at an annual rate of return of 8%. In 20 years, assuming no withdrawals, your \$10,000 investment would grow to \$46,610. In 25 years, it would grow to \$68,485, a 47% gain over the 20-year figure. After 30 years, your account would total \$100,627. (Of course, these are hypothetical examples that do not reflect the performance of any specific investment and assume that no taxes are paid or withdrawals are made during that time.)

If your workplace savings plan contributions are made pretax, as most people's are, compounding really becomes a powerful force. Not having to pay taxes from year to year on either your contributions or the compounded earnings helps your savings grow even faster (though you'll owe taxes on that money when you start withdrawing from your account). The value of compounded tax-deferred dollars is the main reason you may want to fully fund all tax-advantaged retirement accounts and plans available to you, and start as early as you can. Money invested over time offers the greatest potential for compounding to help produce a significant return. With time on your side, you don't necessarily have to aim for investment “home runs” in order to be successful.

Diversify Your Investments

Asset allocation is the process of spreading your dollars over several categories of investments, usually referred to as asset classes. A basic asset allocation would likely include at least stocks, bonds, and cash or cash alternatives such as a money market fund. The term “asset classes” also may refer to subcategories, such as aggressive growth stocks, international stocks, investment-grade corporate bonds, and high-yield or “junk” bonds.

Asset allocation is important for two reasons. First, the mix of asset classes you own is a large factor—some say the biggest factor by far—in determining your overall investment portfolio

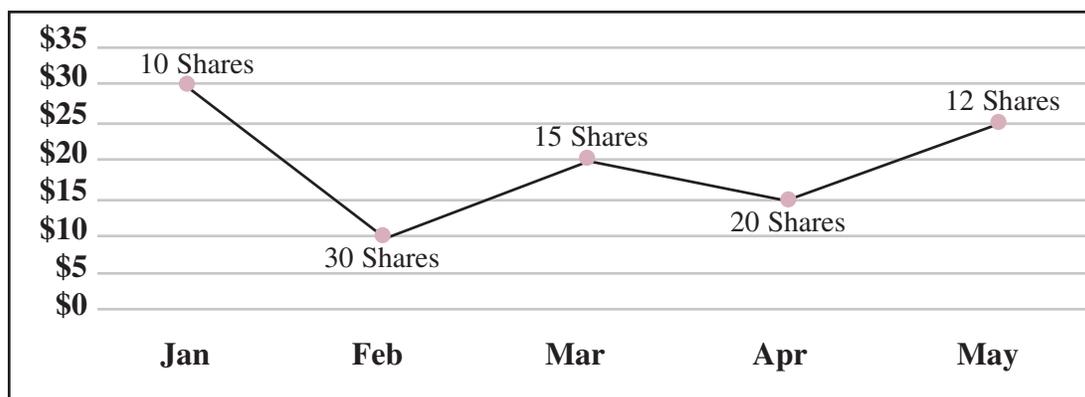

performance. How you divide your money between stocks, bonds, and cash can be more important than your choice of specific investments. Second, by dividing your portfolio among asset classes that don't respond to market forces in the same way at the same time, you can help minimize the effects of market volatility while maximizing your chances of long-term return. Ideally, if your investments in one class are performing poorly, assets in another class may be doing better and may help stabilize your portfolio.

Remember that during any given period of market or economic turmoil, some asset categories and some individual investments historically have been less volatile than others. Bond price swings, for example, have generally been less dramatic than stock prices. You can manage your risk to some extent by diversifying your holdings among various classes of assets, as well as different types of assets within each class. Taking steps that can help manage the amount of volatility you experience can help you stay with your game plan over the long term.

Take Advantage of Dollar Cost Averaging

One of the benefits of participation in your workplace savings plan is that you're automatically using an investment strategy called dollar cost averaging. With dollar cost averaging, you acquire shares of an investment by investing a fixed dollar amount at regularly scheduled intervals over time. When the price is high, your investment buys less; when prices are low, the same dollar investment will buy more shares. A regular, fixed-dollar investment should result in a lower average price per share than you would get buying a fixed number of shares at each investment interval.

The accompanying graph illustrates how share price fluctuations can yield a lower average cost per share through dollar cost averaging. In this hypothetical example, ABC Company's stock price is \$30 a share in January, \$10 a share in February, \$20 a share in March, \$15 a share in April, and \$25 a share in May. If you invest \$300 a month for 5 months, the number of shares you would buy each month would range from 10 shares when the price is at \$30, to 30 shares when the price is at \$10. The average market price is \$20 a share ($\$30 + \$10 + \$20 + \$15 + \$25 = \100 divided by $5 = \$20$). However, because your \$300 bought more shares at the lower prices, the average purchase price is \$17.24 ($\$300 \times 5 \text{ months} = \$1,500$ invested divided by 87 shares purchased = \$17.24).

In addition to potentially lowering the average cost per share, investing the same amount regularly automates your decision-making, and can help take emotion out of investment decisions.

“If you look back, inflation comes as a surprise.

You have to be prepared all the time, even if it doesn't seem necessary.”

-Harold Evensky
Evensky & Katz LLC
09/19/13

“There is a danger that at some point higher inflation rates could be sparked by the flood of money being pumped into economies around the world by central banks in their effort to spur growth.”

-The Wall Street Journal
09/19/13

Stick To Your Strategy

Try to resist the impulses to change your investment strategy with every news headline or investing tip from a relative or coworker. Timing the market correctly is very difficult; even professionals find it a challenge. Most people fare better by having an investment game plan that can weather good times and bad, and then sticking to it.

That doesn't mean you should simply forget about your investments altogether. At least once a year, you should review your portfolio to see if your choices are still appropriate. Even if your circumstances haven't changed, market movements can affect how your money is divided among various types of investments. For example, if one type of asset has been very successful, it may now represent too large a share of your holdings. To rebalance your portfolio, you could sell some of an asset that's now larger than you intended and buy more of a type that is lower than desired. Or you could keep your existing allocation but shift future investments into an asset class you want to increase. But if you don't review your holdings periodically, you won't know whether a change is needed.

All investing involves risk, including the possible loss of principal, and there can be no assurance that any investment strategy will be successful. And diversification alone cannot guarantee a profit or eliminate the possibility of loss, including the loss of principal. Before investing in a mutual fund, consider its investment objectives, risks, charges, and expenses, all of which are outlined in the prospectus, available from the fund. Consider the information carefully before investing. Remember that an investment in a money market fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although the fund seeks to preserve the value of your investment at \$1 per share, it is possible to lose money by investing in the fund. Dollar cost averaging involves continuous investment in securities regardless of fluctuating price levels of such securities. You should consider your financial ability to continue purchases through periods of low price levels.
